U.S.-Chile Joint Commission for Environmental Cooperation, Environmental Cooperation Agreement, 2005-2006 Work Program

Introduction

The objective of the Agreement on Environmental Cooperation between the Government of the United States of America and the Government of the Republic of Chile (U.S.-Chile Environmental Cooperation Agreement, or ECA) is to establish a framework for cooperation between the United States and Chile to promote the conservation and protection of the environment, the prevention of pollution and degradation of natural resources and ecosystems, and the rational use of natural resources, in support of sustainable development.

The Joint Commission for Environmental Cooperation, set up under the ECA, is responsible for establishing and developing programs of work in accordance with the provisions of Article III. This work program reflects national priorities for cooperative activities, as agreed upon by the Parties.

The Parties will begin their cooperative work under this work program in the following priority areas identified for the period 2005-2006:

1. Capacity building and exchange of information on strategies and experiences in order to improve the effectiveness of enforcement and compliance with environmental laws, norms and regulations;
2. Encouraging development and adoption of sound environmental practices and technologies, particularly in business enterprises;
3. Promoting sustainable development and management of environmental resources, including wild fauna and flora, and protected wild areas;
4. Civil society participation in the environmental decision-making process;
5. Environmental education; and
6. Other areas as the Parties may agree.

The Parties note the cooperative work being conducted in accordance with Annex 19.3 of the U.S.-Chile FTA, which includes the following activities: Developing a Pollutant Release and Transfer Register (PRTR) in Chile; Reducing Mining Pollution; Improving Environmental Enforcement and Compliance Assurance; Sharing Private Sector Expertise: Improving Agricultural Practices; Reducing Methyl Bromide Emissions; Improving Wildlife Protection and Management; and Increasing the use of cleaner fuels.

The Parties also note ongoing bilateral cooperative work in other fora, and will seek through this work program to build upon and complement this existing bilateral work.

The Commission may agree to augment this work program with additional projects at any time. The Parties recognize that the activities described in this work program are subject to revision by the organizations implementing the projects.

The project activities described in this work program are subject to the availability of funds.
Priority Area One

Capacity building and exchange of information on strategies and experiences in order to improve the effectiveness of enforcement and compliance with environmental laws, norms and regulations

Background
Both the ECA and the FTA emphasize the importance of effective environmental laws and enforcement of those laws. For example, Article III.2 of the ECA says, "The program of work shall, inter alia, include activities related to: (a) the collection and publication of comparable information on the Parties' environmental legislation, indicators and enforcement activities; and (b) the exchange of information on environmental policies, laws and practices in both countries." Furthermore, Article 19.2.1(a) of the FTA states, "A Party shall not fail to effectively enforce its environmental laws, through a sustained or recurring course of action or inaction, in a manner affecting trade between the Parties."

General Objectives
Exchange information and experiences on environmental legal and regulatory regimes; enforcement and compliance policies, tools and practices; and approaches to environmental monitoring, that contribute to strengthening the effectiveness of implementation of environmental laws and regulations in the United States and Chile.

Priority Area Two

Encouraging development and adoption of sound environmental practices and technologies, particularly in business enterprises

Background
Article III.2 (d) of the ECA states, "the program of work shall, inter alia, include activities related to the promotion of good domestic practices leading to sustainable management of the environment, while Article V (d) notes, "the cooperation contemplated in this Agreement may include facilitation of linkages among representatives from academia, industry, and government to promote the exchange of best practices and environmental information and data of interest to the Parties." Article 19.10 of the U.S.-Chile FTA, Principles of Corporate Stewardship, states, "Recognizing the substantial benefits brought by international trade and investment as well as the opportunity for enterprises to implement policies for sustainable development that seek to ensure coherence between social, economic and environmental objectives, each Party should encourage enterprises operating within its territory or jurisdiction to voluntarily incorporate sound principles of corporate stewardship in their internal policies, such as those principles or agreements that have been endorsed by both Parties."

General Objectives
Encourage enterprises to develop and adopt sound environmental practices and technologies, and to show that doing so not only benefits the environment, but can be done in a manner consistent with maintaining international competitiveness.

Priority Area Three

Promoting sustainable development and management of environmental resources, including wild fauna and flora, and protected wild areas

Background
The preamble to the ECA reaffirms that "economic development, social development and environmental protection are interdependent and mutually reinforcing components of sustainable
Article III.2 (d) of the ECA states, “the program of work shall, *inter alia*, include activities related to the promotion of good domestic practices leading to sustainable management of the environment.” One of the objectives listed at the beginning of the FTA environment chapter is “to contribute to the Parties’ efforts to ensure that trade and environmental policies are mutually supportive and to collaboratively promote the optimal use of resources in accordance with the objective of sustainable development.”

**General Objectives**
Promote the conservation and protection of the environment, the prevention of pollution and degradation of natural resources and ecosystems, and the rational use of natural resources, in support of sustainable development.

**Priority Area Four**

**Civil Society participation in the environmental decision-making process**

**Background**
The participation of civil society is a key component to both the ECA and the FTA environment chapter. Article IV of the ECA promotes the development of opportunities for public participation in cooperative projects, and mandates that each Party should solicit, and take into account as appropriate, the views of its public with the respect to this work plan. Article III.1 of the ECA states that the Joint Commission for Environmental Cooperation must take into account the views and recommendations of the Environment Affairs Council of the FTA on cooperation activities in this work program. Moreover, FTA Articles 19.3 and 19.4 outline opportunities for public participation.

**General Objectives**
Share experiences on involving the public in decision-making regarding environmental matters, and enhance openness and transparency in regulatory and program implementation.

**Priority Area Five**

**Environmental Education**

**Background**
The preamble to the ECA reaffirms the mutual acknowledgement of the “the need for greater promotion of environmental education and awareness”. Moreover, ECA Article V (b), as well as Article 4 of FTA Annex 19.3 regarding Environmental Cooperation, include educational and outreach programs in the cooperative activities.

**General Objectives**
Exchange knowledge and experiences regarding environmental education strategies and programs, with a principal focus on basic and community-level education.

**Priority Area Six**

**Other areas as the Parties may agree**

**Background**
Because priorities may change over the two-year period of this work program, and with the desire to accommodate new project priorities as they may arise, this area allows flexibility for incorporating additional cooperative activities that may not fit into the previous five categories. Additional areas may include, for example, technical consultations on:
a) Methodologies for assessing vulnerability to climate change
b) Natural disasters
c) Environmental health
d) Development of public-private partnerships for achievement of environmental objectives.

| 1. Capacity building and exchange of information on strategies and experiences in order to improve the effectiveness of enforcement and compliance with environmental laws, norms and regulations | 1.1. Sharing best practices for promoting and ensuring compliance with environmental laws, norms and regulations | 1.1.1. Visit of Chilean officials to gain understanding of aspects of environmental law and compliance in the United States:  
  • Study tour for 15 Chilean professionals to learn about mechanisms and procedures used in the United States and to establish a direct relationship with their U.S. counterparts.  
  • Topics of mutual interest may, for example, include:  
    • administrative, civil and criminal options for enforcement;  
    • penalty policies, calculating economic benefit of non-compliance;  
    • enforcement data management and targeting methodologies;  
    • sector-based approaches to compliance promotion;  
    • enforcement program performance measurement.  
  • Explore the possibility of conducting a 4 to 6 month exchange program in the United States by a Chilean official. | United States  
  • Environmental Protection Agency (EPA)  
  • Department of Justice (DOJ)  
  • Department of State (DOS)

### 1.1.2. Strategies for enforcing environmental regulations

In follow-up to the activities and relationships established under 1.1.1, conduct technical consultations to:

- Contribute to the design of strategies to enforce compliance with norms or regulations and environmental conditions committed to in voluntary agreements entered into between the public and private sector; and
- Contribute to the generation and refinement of technical capacity for professionals and technical personnel in the public sector that participate in environmental regulation and agreement enforcement and compliance verification functions.

2.2.2 Clean Energy Initiative

- Conduct technical consultations to exchange information regarding approaches to clean energy;

- Explore possible development of a U.S./Chile component of the U.S.-led Clean Energy Initiative.

Could include:

- Collaboration on promoting renewable energy opportunities (e.g., geothermal, wind, biogas, hydroelectric power);

- Exchange of information on approaches to improving energy efficiency in selected industry sectors;

- Exchange of information regarding eco-efficient construction to conserve and save energy, especially in low-income and rural housing, and the use of alternative energy.
